MICROPOROUS FABRIC**

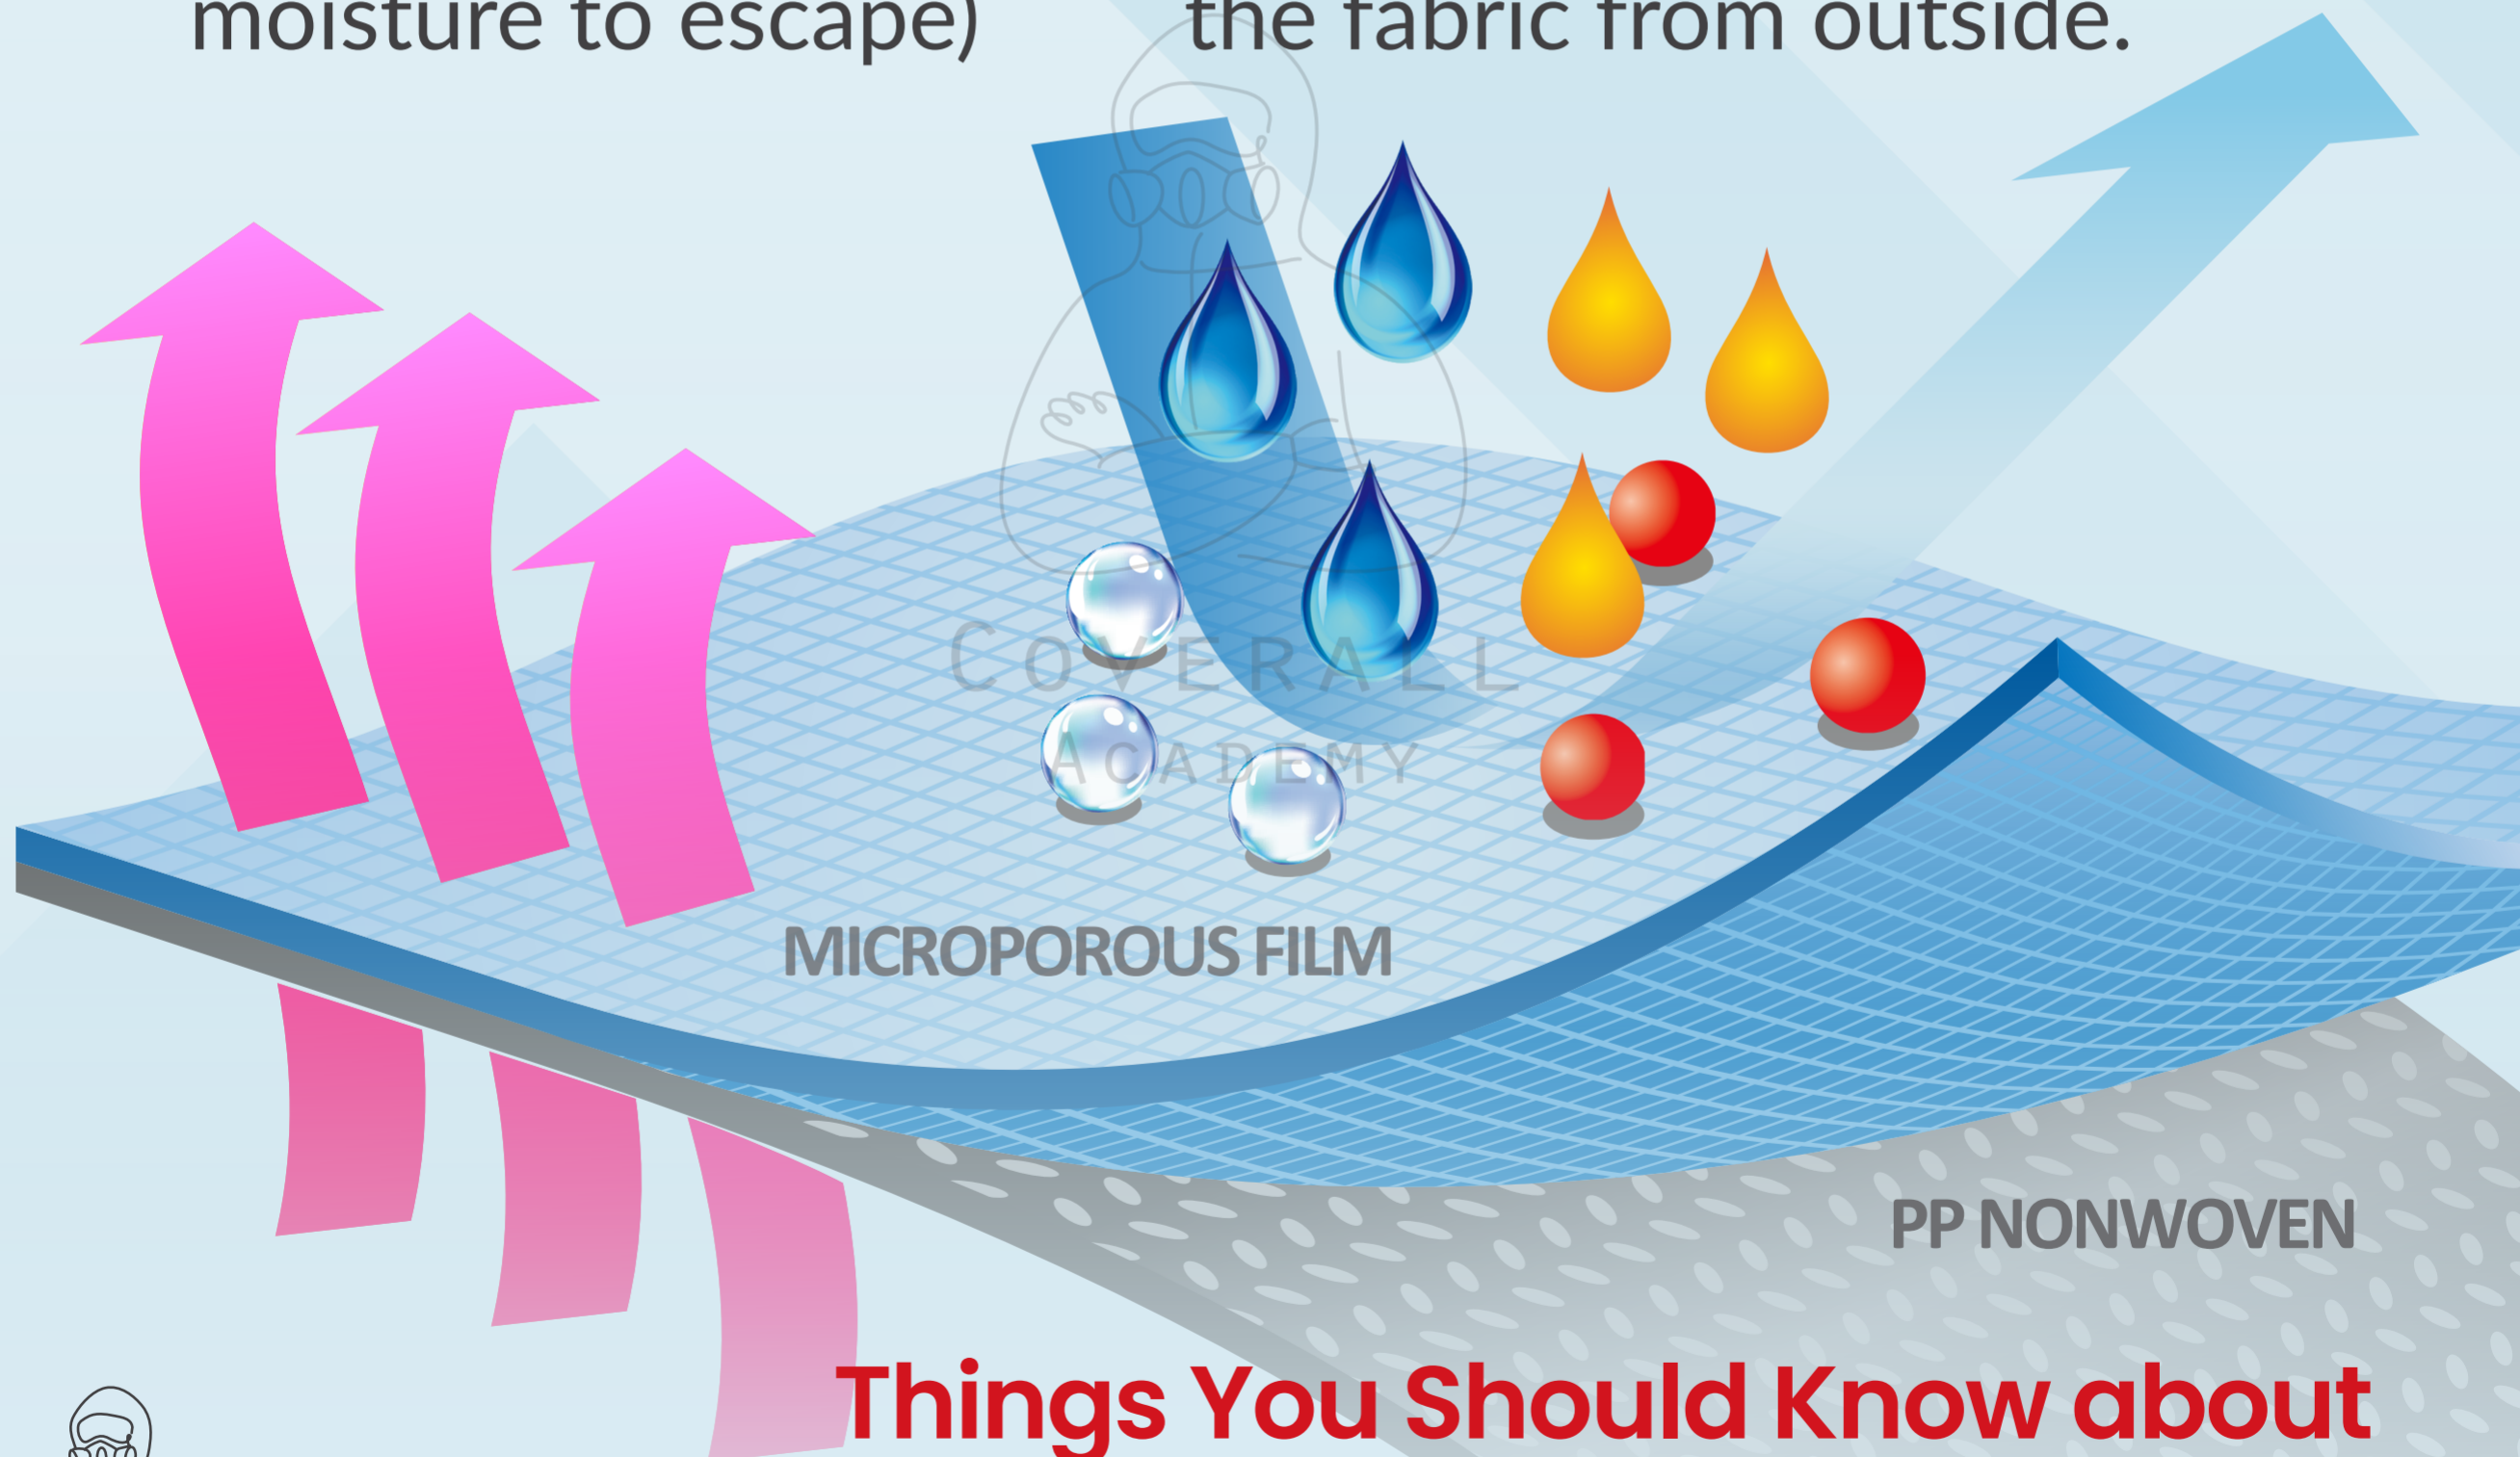

# How come it is liquid-proof yet breathable?

**250 times**

larger than moisture vapor (allow heat & moisture to escape)

**15,000 - 20,000 times**

smaller than water drop so that liquid cannot go through the fabric from outside.

MICROPOROUS FABRIC**

How to determine whether the fabric is good quality or not?

A good-quality microporous film has small micropores and consistent arrangement to resist liquid fluid and the moisture vapor can easily discharge through the multi-layer winding holes .
